Exp. 4. Kronig Penney Model

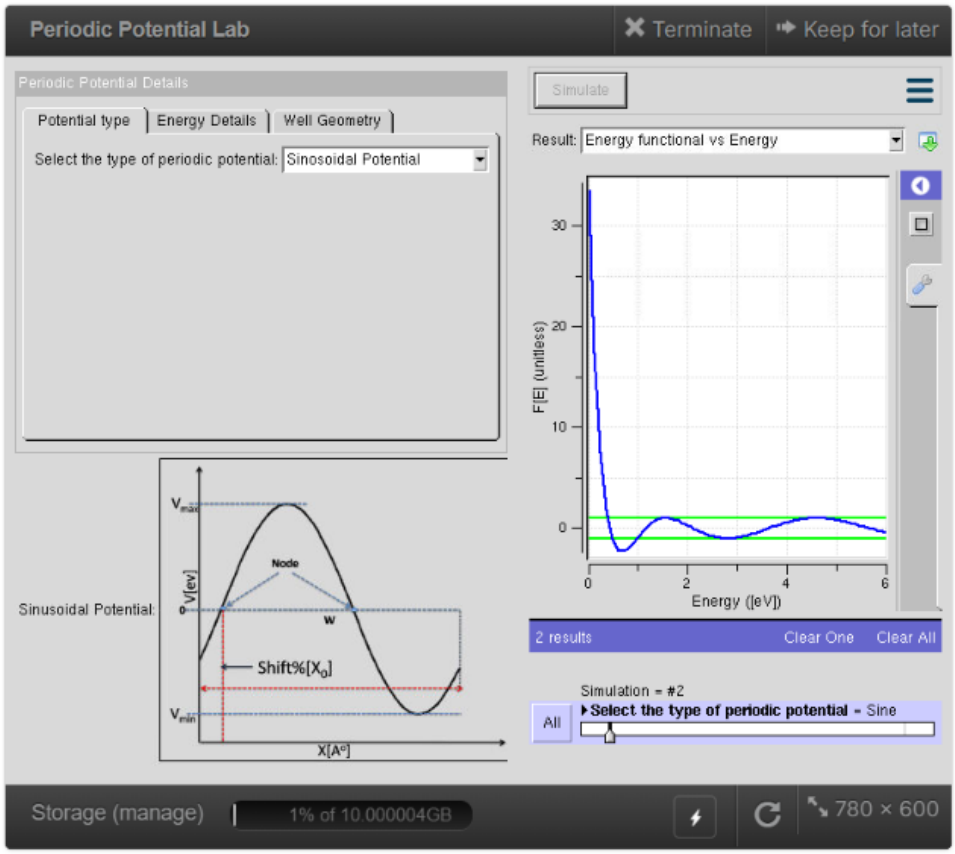

objective:

To simulate Energy functional vs Energy graph using Kronig Penney model

Case Study 1: Simulate the output for Triangular well

Case Study 2: Simulate the output for Sinusoidal Potential

Reflection:

simulated electronic behavior in a periodic crystal lattice using a periodic potential tool on nanoHUB.

gained a visual understanding of how allowed and forbidden energy bands form within crystalline materials.

also learned how altering potential well depth and lattice constants directly impacts the resulting band gaps.
